What Is Beamer?

- Beamer is a flexible LATEX class for making slides and presentations.
- It supports functionality for making PDF slides complete with colors, overlays, environments, themes, transitions, etc.
- Adds a couple new features to the commands you've been working with.

What Is Beamer?

- Beamer is a flexible LATEX class for making slides and presentations.
- It supports functionality for making PDF slides complete with colors, overlays, environments, themes, transitions, etc.
- Adds a couple new features to the commands you've been working with.
- As you probably guessed, this presentation was made using the Beamer class.

Document Template: slides.tex

```
\documentclass[pdf]
          {beamer}
\modeentation>{}
%% preamble
\title{The title}
\subtitle{The subtitle}
\author{your name}
\begin{document}
```

```
%% title frame
\begin{frame}
    \titlepage
\end{frame}
%% normal frame
\begin{frame}{Frame title}
    The body of the frame.
\end{frame}
\end{document}
```

athena% make slides.pdf

What would you like in your sandwich?

• So what can you do between \begin{frame} and \end{frame}?

What would you like in your sandwich?

- So what can you do between \begin{frame} and \end{frame}?
- Pretty much anything you can do in a normal LATEX document:

What would you like in your sandwich?

- So what can you do between \begin{frame} and \end{frame}?
- Pretty much anything you can do in a normal LATEX document:
 - figures, tables, equations, normal text, etc.

Don't Do This

• Here is a well-known formula:

$$\sum_{k=0}^{n} k = \frac{n(n+1)}{2}$$

• Here is a less well-known, but still useful, formula:

$$\sum_{k=0}^{n} k^2 = \frac{n(n+1)(2n+1)}{6}$$

This is pretty well-known, too:

$$\sum_{k=0}^{n} k^3 = \left(\frac{n(n+1)}{2}\right)^2$$

• Who knows about this one?

$$\sum_{k=0}^{n} k^4 = \frac{n(6n^4 + 15n^3 + 10n^2 + 1)}{30}$$

Making Slides

Have fun factoring the quartic expression!

```

Useful Commands that Work with Specifications

\textbf<>{}	controls when to bold text	\only<>{}	controls when to reveal text, occu- pies NO space oth- erwise
\textit<>{}	controls when to italicize text	\uncover<>{}	controls when to reveal text, DOES occupy space oth- erwise
\color<>[]{}	controls when to change color of text	\alt<>{}{}	reveals first argument when specification is true, otherwise reveals second argument
\alert<>{}	controls when to highlight text (de- fault red)	\item<>	controls when an item is shown

Which president said, "Most folks are about as happy as they make up their minds to be"?

Hints:

Which president said, "Most folks are about as happy as they make up their minds to be"?

A James Madison

Hints:

James Madison ate broccoli.

Which president said, "Most folks are about as happy as they make up their minds to be"?

A James Madison

B Harry Truman

Hints:

James Madison ate broccoli. Harry Truman drank milk.

Math stuff

Easy Theorem

The equation

$$x^n + y^n = z^n,$$

has no integer solutions for n > 2 where $x, y, z \neq 0$.

Math stuff

Easy Theorem

The equation

$$x^n + y^n = z^n,$$

has no integer solutions for n > 2 where $x, y, z \neq 0$.

Remark

This problem was first posed in 10,000 B.C.

Math stuff

Easy Theorem

The equation

$$x^n + y^n = z^n,$$

has no integer solutions for n > 2 where $x, y, z \neq 0$.

Proof

The proof is trivial and left as an exercise for the reader.

Remark

This problem was first posed in 10,000 B.C.

Math stuff: Backstage

```
\newtheorem{thm}{Easy Theorem}
\newtheorem{pf}{Proof}
\newtheorem{rmk}{Remark}
\begin{thm}<1->
    x^n+y^n=z^n,
    has no integer solutions for $n>2$
    where x,\,y,\,z\, neg\,0.
\end{thm}
\left( \frac{pf}{3} \right)
    The proof is trivial and left as an exercise.
\end{pf}
\begin{rmk}<2->
    This problem was first posed in $10,000$ B.C.

Pre-customized Templates

- To make your presentation use a shiny theme like ours:
 - Find \modeentation>{} at the top of your file
 - Insert \usetheme{Warsaw} into the {}
- Also available within each Presentation Theme:
 - Color themes: \usecolortheme{colorthemename} control colors for bullets, background, text, etc.
 - Inner themes: \useinnertheme{innerthemename}
 control main title, environments, figures and tables, footnotes, etc.
 - Outer themes: \useoutertheme{outerthemename} control head-/foot-lines, sidebars, frame titles, etc.

A Sampling of Themes

• General themes:

```
default Antibes Berlin Copenhagen
Madrid Montpelier Ilmenau Malmoe
CambridgeUS Berkeley Singapore Warsaw
```

- Also available:
 - Color themes: beetle, beaver, orchid, whale, dolphin
 - Inner themes: circles, rectanges, rounded, inmargin
 - Outer themes: infolines, smoothbars, sidebar, split, tree
- See The Beamer Theme Matrix
